

Renato dos Santos Valente

SKILLS

LANGUAGES

English - Advanced/Intermediate
Portuguese - Native

GRADUATION

Systems Information Degree
UMC - Universidade de Mogi das Cruzes
Jan 2019 - dez 2022

COURSES

English Course
Cultura Inglesa - UI3(Upper-intermediate 3)

ABOUT ME

I have a degree in Systems information and am currently looking for job opportunities for front end development. I worked as a QA(Quality Assurance) engineer for more than one year, but working with software development is what I really like to do. I have created a few projects to test and show my skills and knowledge.

I hope I'll find a place where I get to work with front end development, help the company to grow and, more importantly, evolve as a professional and as a person.

PROJECTS

Calculator

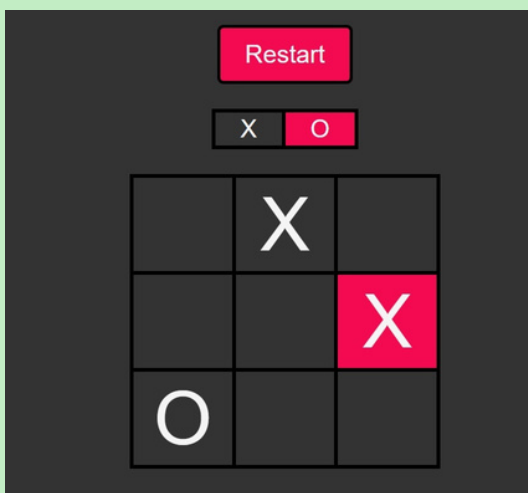

<https://github.com/Renato-Valente/react-calculator>

The purpose for this project was to create a web application that features a simple, yet functional calculator using ReactJS. The React Library proved to be very useful for this project since it allows us to create reusable and maintainable code by creating React Components. Every button in the calculator is a component.

Tic Tac Toe

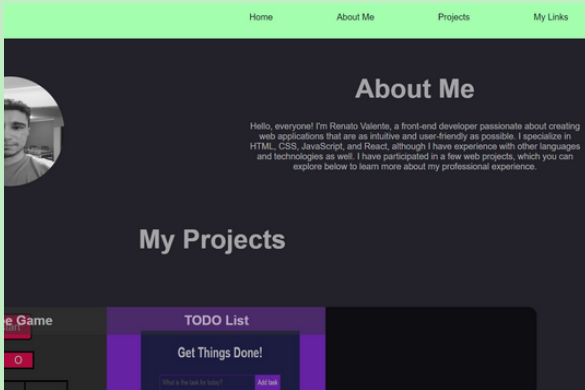

<https://github.com/Renato-Valente/react-tic-tac-toe/tree/master>

The goal for this project was to develop a functional Tic Tac Toe web application using React and improve my coding skills by doing so. I found a good example of a layout for this project on the internet and tried to replicate it using my own knowledge. For me, the biggest challenge here was programming the game logic.

Personal Portfolio

<https://github.com/Renato-Valente/front-end-portfolio>

The purpose of this project was to create a web application that works as a personal portfolio for me. In the website I talk about myself and my professional experience and also show some of my projects. The project was developed using the React library. For me, the biggest challenge was to develop the carousel slider since I didn't use any library to do so.
